VOLKSWAGEN - continued

▲² GOLF, JETTA, SCIROCCO 1.5, 1.6 '74→ COVER ASSEMBLY HE4532

When fitting this cover assembly it should be noted that the flywheel has two dowels which locate in round holes in the cover flange. The correct holes are identified by small adjacent punched indents in the cover.

It is recommended that the cover and flywheel are marked with paint prior to fitting to vehicle to assist alignment.

The clutch release Plate is attached by a retaining ring which is located under three of the spring fingers. Note that the ends of the retaining ring should be in one of the holes in the release plate. The turned up ends must face inwards towards the engine.
